# Introduction to HTML

# What is HTML?

HTML

☐ Hyper Text Markup Language

☐ HTML is the standard markup language for Web pages.

☐ With HTML you can create your own Website.

A large orange circle is centered on the slide, containing the text "How to write HTML code".

## How to write HTML code

# Creating HTML file

Save file using “.html” or  
“.htm” extension

# IDE Introduction

Notepad

Visual Studio  
Code | VS Code

Netbeans

A large orange circle is centered on the slide, containing the text "HTML file structure".

HTML file  
structure

# HTML Syntax

- All HTML documents must start with a document type declaration: `<!DOCTYPE html>`.
- The HTML document itself begins with `<html>` and ends with `</html>`.
- The metadata (data about data) is written within `<head>` and `</head>`.
- The visible part of the HTML document is between `<body>` and `</body>`.

```
<!DOCTYPE html>
<html>
  <head>
  </head>
  <body>
  </body>
</html>
```

A large orange circle is centered on the slide, containing the text "Let's run HTML code".

Let's run  
HTML code

# HTML basics

# Tag and attributes

1. Instruction enclosed within “<” and “>” (angle brackets) are called as “**tag**”.
2. In paired **tag**, first **tag** is called the opening **tag** and the second **tag** is called the closing **tag**.  
Example: <xyz>....</xyz>
3. The second **type of tag** is the singular **tag**, which is also known as a stand-alone **tag** or empty **tag**.  
Example: </xyz>

1. All HTML elements can have **attributes**.
2. Attributes provide **additional information** about elements.
3. Attributes are always specified in **the start tag**.
4. Attributes usually come in name/value pairs like: **name="value"**

**Example:**

<xyz name="value">.....</xyz>

<xyz name="value"/>

# HTML Heading<h1---6> Tag

Heading tag is used to give headings of different sizes in a document.

```
<body>  
  <h1>Welcome to TechTalent Academy</h1>  
  <h2>Welcome to TechTalent Academy</h2>  
  <h3>Welcome to TechTalent Academy</h3>  
  <h4>Welcome to TechTalent Academy</h4>  
  <h5>Welcome to TechTalent Academy</h5>  
  <h6>Welcome to TechTalent Academy</h6>  
</body>
```

Input

**Welcome to TechTalent Academy**

**Welcome to TechTalent Academy**

**Welcome to TechTalent Academy**

**Welcome to TechTalent Academy**

**Welcome to TechTalent Academy**

**Welcome to TechTalent Academy**

Output

# HTML Paragraph<p> Tag

The <p> tag is used to define a paragraph in a document.

```
<body>  
  
<p> This is First Paragraph </p>  
<p> This is Second Paragraph </p>  
<p> This is Third Paragraph </p>  
  
</body>
```

Input

```
This is First Paragraph  
  
This is Second Paragraph  
  
This is Third Paragraph
```

Output

# HTML “Basic” Tag

## Line Break Tag

Whenever you use the `<br />` element, anything following it starts from the next line.

Example:

```
<body>  
    <p>Hello<br /> Welcome to TTA.<br />Thanks<br /> V</p>  
</body>
```

```
Hello  
Welcome to TTA.  
Thanks  
V
```

Output

# HTML “Basic” Tag

- You can use **<center>** tag to put any content in the center of the page or any table cell.
- Horizontal lines are used to visually break-up sections of a document.
- The **<hr>** tag creates a line from the current position in the document to the right margin and breaks the line accordingly.
- Any text between the opening **<pre>** tag and the closing **</pre>** tag will preserve the formatting of the source document.
- Nonbreaking space: &nbsp;

# HTML: Attributes

| Attribute  | Options                          | Function   |
|------------|----------------------------------|--|
| align      | right, left, center              | Horizontally aligns tags                                   |
| valign     | top, middle, bottom              | Vertically aligns tags within an HTML element.             |
| bgcolor    | numeric, hexadecimal, RGB values | Places a background color behind an element                |
| background | URL                              | Places a background image behind an element                |
| id         | User Defined                     | Names an element for use with Cascading Style Sheets.      |
| class      | User Defined                     | Classifies an element for use with Cascading Style Sheets. |
| width      | Numeric Value                    | Specifies the width of tables, images, or table cells.     |
| height     | Numeric Value                    | Specifies the height of tables, images, or table cells.    |
| title      | User Defined                     | "Pop-up" title of the elements.                            |

# HTML: Formatting tag

| Tag   | Description              |
|---|--------------------------|
| <code>&lt;b&gt;..<b&gt; b&gt;<="" code=""></b&gt;></code>   | <b>Bold Text</b>         |
| <code>&lt;i&gt;..<i&gt; code="" i&gt;<=""></i&gt;></code>   | <b>Italic Text</b>       |
| <code>&lt;u&gt;..<u&gt; code="" u&gt;<=""></u&gt;></code>   | <b>Underlined Text</b>   |
| <code>&lt;strike&gt;...&lt;/strike&gt;</code>               | <b>Strike Text</b>       |
| <code>&lt;tt&gt;..<b&gt; code="" tt&gt;<=""></b&gt;></code> | <b>Monospaced Font</b>   |
| <code>&lt;sup&gt;...&lt;/sup&gt;</code>                     | <b>Superscript Text</b>  |
| <code>&lt;sub&gt;...&lt;/sub&gt;</code>                     | <b>Subscript Text</b>    |
| <code>&lt;mark&gt;...&lt;/mark&gt;</code>                   | <b>Marked Text</b>       |
| <code>&lt;abbr title="xyz"&gt;...&lt;/abbr&gt;</code>       | <b>Text Abbreviation</b> |
| <code>&lt;q&gt;..<b&gt; code="" q&gt;<=""></b&gt;></code>   | <b>Short Quotations</b>  |

# HTML: Grouping Content

The **<div>** and **<span>** elements allow you to group together several elements to create sections or subsections of a page.

```
<div id = "menu" align = "middle" >
    <h5>Content Articles</h5>
    <p>Actual content goes here.....</p>
</div>
<div id = "content" align = "left" >
    <h5>Content Articles</h5>
    <p>Actual content goes here.....</p>
</div>
```

```
<p>This is the example of <span style = "color:green">span tag</span> </p>
```

# HTML image <img> Tag

<img> tag is used to display image on the web page.

Syntax:      

Example:    

## Note:

While giving image path(src), either give full image path or keep image in same folder as html file and write only image name.

# HTML <details> Tag

Specify details that the user can open and close on demand:

Syntax:

```
<details>  
  <summary>Paragraph Heading</summary>  
  <p>Paragraph</p>  
</details>
```

Note:

The [<summary>](#) tag is used in conjunction with <details> to specify a visible heading for the details.

# HTML: List <li>

HTML offers three ways for specifying lists of information. All lists must contain one or more list elements.

## **Lists may contain –**

- **<ul>** – An unordered list. This will list items using plain bullets.
- **<ol>** – An ordered list. This will use different schemes of numbers to list your items.
- **<dl>** – A definition list. This arranges your items in the same way as they are arranged in a dictionary.

# HTML: List<li>

## HTML Unordered Lists

```
<ul>
  <li>Beetroot</li>
  <li>Ginger</li>
  <li>Potato</li>
  <li>Radish</li>
</ul>
```

- Beetroot
- Ginger
- Potato
- Radish

### The type Attribute

```
<ul type = "square">
<ul type = "disc">
<ul type = "circle">
```

# HTML: List<li>

## HTML Ordered Lists

```
<ol>
  <li>Beetroot</li>
  <li>Ginger</li>
  <li>Potato</li>
  <li>Radish</li>
</ol>
```

```
1. Beetroot
2. Ginger
3. Potato
4. Radish
```

### The type Attribute

```
<ol type = "1"> - Default-Case Numerals.
<ol type = "I"> - Upper-Case Numerals.
<ol type = "i"> - Lower-Case Numerals.
<ol type = "A"> - Upper-Case Letters.
<ol type = "a"> - Lower-Case Letters.
```

# HTML: List

## HTML Definition Lists

HTML supports a list style which is called **definition lists** where entries are listed like in a dictionary

Definition List makes use of following three tags.

`<dl>` – Defines the start of the list

`<dt>` – A term

`<dd>` – Term definition

`</dl>` – Defines the end of the list

```
<dl>
  <dt><b>HTML</b></dt>
  <dd>This stands for Hyper Text Markup Language</dd>
  <dt><b>HTTP</b></dt>
  <dd>This stands for Hyper Text Transfer Protocol</dd>
</dl>
```

# HTML Anchor <a> Tag

- HTMLAnchor tag **defines a hyperlink** that links one page to another.
- The Anchor tag is defined **by <a> tag**.
- The **href** (Hypertext Reference) **attribute** is used to **give the reference(Path) of the page** or document to be linked.

Syntax:      `<a href="url">link text</a>`

Example:      `<a href="https://techtalent.academy/">Visit our Website</a>`

TECH TALENT  
ACADEMY
